### **Unitask Announces Cloud Based Output Management Support: *Company Extends Leadership of Oracle E-Business Suite Printing for Hosting***

**Cincinnati, OH—March 10, 2010**—Unitask Software, a leading provider of solutions for the Oracle E-Business Suite applications market, today announced the extension of its Output Director solution suite with full support for cloud-based printing and enterprise output management for the Oracle E-Business Suite.

The extension of the Output Director architecture provides for a seamless integration in the growing movement of Oracle E-Business Suite computing for both the cloud and an externally hosted environment. The extension facilitates full transparency and flexibility by allowing companies a choice in which architecture they choose to implement: self hosted, externally hosted, or fully outsourced—without service degradation or user impact.

“Our output management solution runs as a native Oracle Application which allows for immediate integration into the full E-Business Suite and all associated modules, providing the enterprise wide print capability in any geographic location,” said Dale D. Royal, Unitask Chairman and CEO.

The move and extension to externally hosted services means Unitask now provides a single interface from which customers can direct all output of their data, whether it is local, in remote offices, or over cloud-based services.

Output Director further allows for the user to print to a wide range of devices—from lower-cost cloud-based print devices through high capacity output printers—regardless of whether the system is implemented using a self-hosted architecture or configured to benefit from the cloud. In addition, specialty devices such as check and bar code printers are supported, and users can manage remotely printed data and print to email distribution lists. Finally, the software ensures extension of the native data security while enabling enterprise output management from the cloud.

“The ability to seamlessly incorporate alternate, extended, or outsourced hosting architectures has become a hot topic as output demands continue to grow and IT managers look for alternatives that allow for budget relief in a chaotic financial climate,” said Royal. “Output Director now delivers a key component of that solution and architecture.”

#### **About Unitask**

Unitask is committed to helping organizations implement, manage and run their Oracle E-Business Suite. Unitask creates, sells and supports software products based on experience gained from over a decade of Oracle E-Business Suite implementation projects. Customers of the Oracle E-Business Suite around the world rely on Unitask products to eliminate implementation and operational risk, improve the quality of the application and accelerate time-to-value.
