

FOR IMMEDIATE RELEASE

Unitask Software Announces Full Support of Microsoft Print Server and the Oracle E-Business Suite: Unitask's Output Director Enables Oracle E-Business Suite Printing on Microsoft Print Servers

Cincinnati, OH—February 2, 2010—Unitask Software, as a leading provider of solutions for the Oracle E-Business Suite applications market, today announced the extension of its Output Director solution suite with full support of printing and enterprise output management with integration of the Microsoft Print Server architecture for the Oracle E-Business Suite.

“The advances in our customers often see via implementation of the Oracle E-Business Suite, as well as that of Microsoft's Print Server architecture has been outstanding. The business problem that has remained is how to effectively integrate these two solutions, for one cohesive, transparent solution. Output director now solves this real world issue and delivers immediate and quantifiable value across all business lines,” said Dale D. Royal, Chairman and CEO of Unitask.

As an enterprise infrastructure standard, Microsoft Print Servers help reduce administrative and management workload by centralizing local and remote printer management at the print server itself. Microsoft Print Servers also simplify many of the labor-intensive functions experienced by users when using direct IP print connections, thereby making it a natural extension of the Unitask Output Director solution set.

Unitask's Output Director has been key for Oracle E-Business Suite customers in meeting deadlines, reducing the pressure on support personnel, and providing printing and output based security. The Unitask solution is Oracle-certified and eliminates many of the operational challenges organizations face in the implementation, deployment, and maintenance of the Oracle E-Business Suite.

Designed and developed as an Oracle E-Business Suite application module that installs directly into an Oracle instance, Unitask Output Director does not require any additional hardware or software. This further simplifies the enterprise and day-to-day operations support. Once installed, Output Director completely eliminates the standard Oracle requirement of repeatedly setting up print queues in the operating system, as well as removing the need to configure printers within the E-Business Suite, because Output Director's Oracle E-Business Suite interface provides a director connection between the E-Business Suite and a Microsoft Print Server.

Oracle E-Business Suite users with Microsoft Print Servers can rely on Output Director to help ensure that end-users will be able to leverage their existing investments even though Microsoft Print Servers are not part of the standard Oracle Applications architecture. IT departments can complete E-Business Suite upgrades or changes without fear of making printers unavailable for such mission critical tasks such as check printing, invoicing, and financial reporting.

“We are pleased to be able to offer a simple solution to what can be a very labor-intensive problem,” said Royal. “Simplified output management is part of Unitask's ‘Do More -- Pay Less’ solution set and also a core component of the company philosophy.”

About Unitask

Unitask is committed to helping organizations implement, manage and run their Oracle E-Business Suite. Unitask creates, sells and supports software products based on experience gained from over a decade of Oracle E-Business Suite implementation projects. Customers of the Oracle E-Business Suite around the world rely on Unitask products to eliminate implementation and operational risk, improve the quality of the application and accelerate time-to-value.
